下載 composer

Download Composer Latest: v2.7.1

Windows Installer

The installer - which requires that you have PHP already installed - will download Composer for you and set up your PATH environment variable so you can simply call `composer` from any directory.

Download and run [Composer-Setup.exe](#) - it will install the latest composer version whenever it is executed.

Command-line installation

To quickly install Composer in the current directory, run the following script in your terminal. To automate the installation, use [the guide on installing Composer programmatically](#).

```
php -r "copy('https://getcomposer.org/installer', 'composer-setup.php');"
php -r "if (hash_file('sha384', 'composer-setup.php') === 'edb40769019ccf227279e3bdd1f5b2e9950eb000c3233ee85148
php composer-setup.php
php -r "unlink('composer-setup.php');"
```

This installer script will simply check some `php.ini` settings, warn you if they are set incorrectly, and then download the latest `composer.phar` in the current directory. The 4 lines above will, in order:

- Download the installer to the current directory
- Verify the installer SHA-384, which you can also [cross-check here](#)
- Run the installer
- Remove the installer

Most likely, you want to put the `composer.phar` into a directory on your PATH, so you can simply call `composer` from any directory (*Global install*), using for example:

可透過指令 `composer` 確認是否安裝完成

```
命令提示字元
Microsoft Windows [版本 10.0.16299.15]

C:\Users\user>composer

Composer version 2.7.1 2024-02-09 15:26:28

Usage:
  command [options] [arguments]

Options:
  -h, --help                Display help for the given command. When no command is given display help for the list
command
  -q, --quiet               Do not output any message
  -V, --version              Display this application version
  --ansi|--no-ansi          Force (or disable) ANSI output
  -n, --no-interaction      Do not ask any interactive question
  --profile                 Display timing and memory usage information
  --no-plugins              Whether to disable plugins.
  --no-scripts              Skips the execution of all scripts defined in composer.json file.
  -d, --working-dir=WORKING-DIR If specified, use the given directory as working directory.
  --no-cache                Prevent use of the cache
  -v|vv|vvv, --verbose      Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and
3 for debug
```

透過指令建立 laravel 專案

EX : `composer create-project laravel/laravel example-app`

`composer create-project laravel/laravel`

`composer create-project laravel/laravel test0305`

轉換到當下目錄

EX : `cd example-app`

`cd laravel`

`cd test0305`

使用

`php artisan serve`

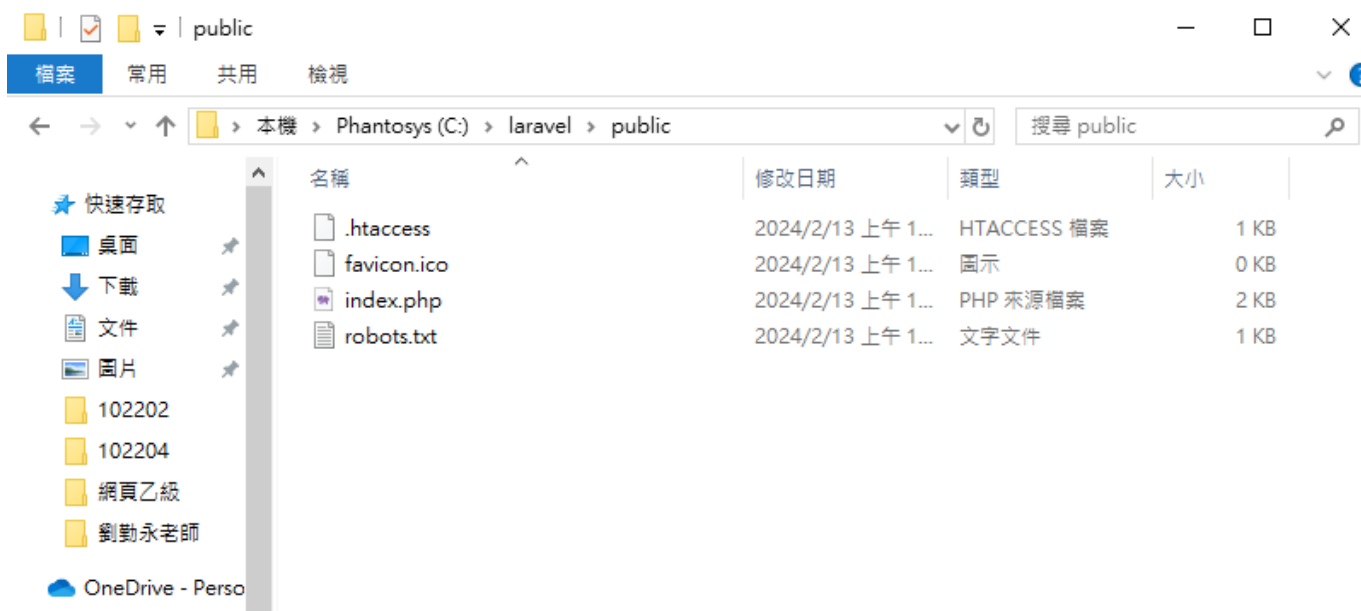

不使用

`php artisan serve`

改用

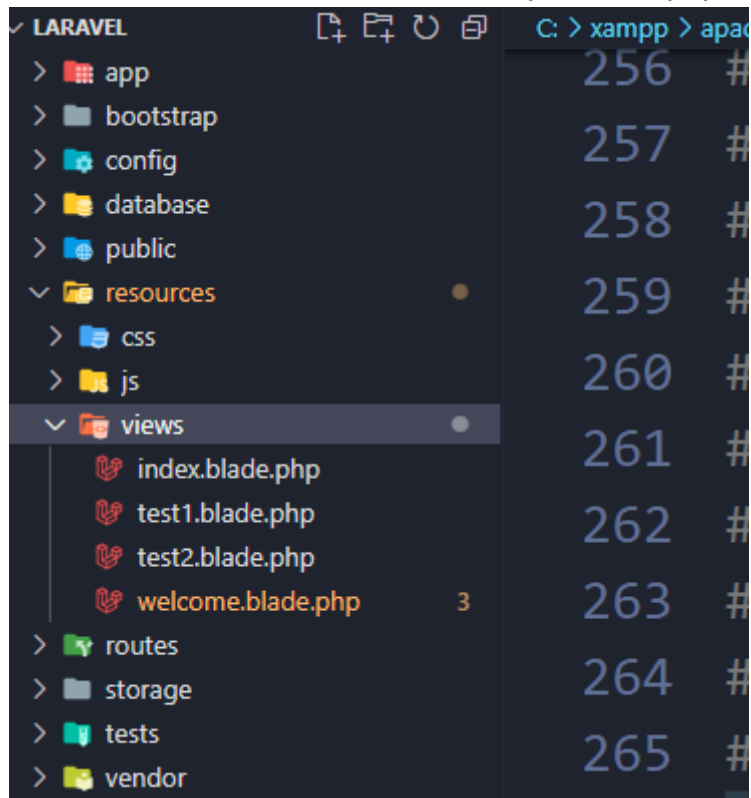

Xampp

將DocumentRoot 更改成 laravel 專案下的 public 位置

```
C: > xampp > apache > conf > httpd.conf
256 # DocumentRoot "D:/web_bquiz01_hw"
257 # <Directory "D:/web_bquiz01_hw">
258 # DocumentRoot "D:/web_bquiz02"
259 # <Directory "D:/web_bquiz02">
260 # DocumentRoot "D:/web_bquiz03"
261 # <Directory "D:/web_bquiz03">
262 # DocumentRoot "D:/web_bquiz04"
263 # <Directory "D:/web_bquiz04">
264 # DocumentRoot "D:/tese02"
265 # <Directory "D:/tese02">
266 DocumentRoot "C:/laravel/public"
267 <Directory "C:/laravel/public">
268 #
269 # Possible values for the Options directive
270 # or any combination of:
```

檔案 resources > views > 建立 example.blade.php 檔案

並將檔名example 帶入

檔案 routes > web.php 更改路由器位置

```

10 | Here is where you can register web
11 | routes are loaded by the RouteServiceProvider
12 | be assigned to the "web" middleware
13 |
14 */
15
16 // Route::get('/', function () {
17 //     return view('welcome');
18 // });
19
20 Route::get('/', function () {
21     return view('index');
22 });
23 Route::get('/test1', function () {
24     return view('test1');
25 });
26 Route::get('/test2', function () {
27     return view('test2');
28 });
29

```

再透過 `http://localhost` 就能找到網頁

Actions Handled by Resource Controllers

Verb	URI	Action	Route Name
GET	/photos	index	photos.index
GET	/photos/create	create	photos.create
POST	/photos	store	photos.store
GET	/photos/{photo}	show	photos.show
GET	/photos/{photo}/edit	edit	photos.edit
PUT/PATCH	/photos/{photo}	update	photos.update
DELETE	/photos/{photo}	destroy	photos.destroy

Cat List

Lorem ipsum dolor sit amet.

[Add Excel](#)

id	name	operate
1	Amy	Edit Del
1	Amy	Edit Del
1	Amy	Edit Del

Laravel clone

1. Run git clone

2. composer install
3. cp .env.example .env
4. php artisan key:generate
5. php artisan migrate
6. php artisan serve
7. Go to link localhost:8000
